## Pavers & Planks

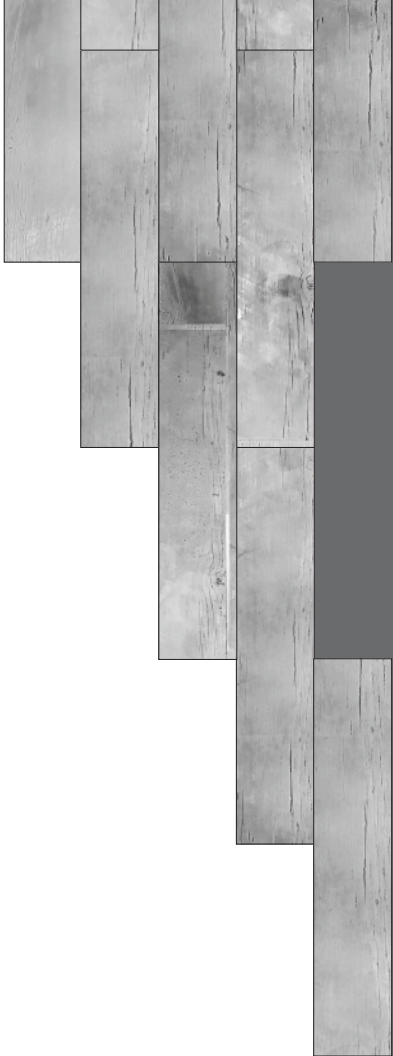

### Strength To Last a Lifetime

Many people think of sidewalks when they hear the word concrete. At Rockwater, it's so much more than common sidewalk material. We have created special blends of ingredients to manufacture strong and beautiful products for your home, inside and out.

Our high performance concrete is 4Xs stronger than your typical sidewalk concrete and will actually bend before it breaks. Rockwater Pavers are made from a proprietary composite concrete designed to maintain their integrity from manufacturing, to the installation process, and finally, through a lifetime of use.

### The Green (and Local) Factor

We use up to 37% of recycled cementitious materials to produce our concrete, and filter and treat any of our water that is put back into the environment. Plus, we source our raw materials from the closest possible location. We love where we live and want to treat it right.
